Friendswood, TX | (832) 490-8504 | saramaknojia94@gmail.com | [linkedin.com/in/sara-maknojia](https://www.linkedin.com/in/sara-maknojia) | saramaknojia94-ux.github.io

Analytics leader with 6+ years building production data infrastructure, executive reporting systems, and AI-powered clinical tools in regulated healthcare environments. Led a \$1M data integration initiative, published researcher in public health, and MSDS candidate at Boston University. Equally at home in the pipeline, the dashboard, and the boardroom.

CORE COMPETENCIES

Analytics & Engineering: SQL (CTEs, window functions, data modeling), Python (pandas, NumPy, scikit-learn, XGBoost, SHAP), ETL/ELT pipelines, Snowflake, REST APIs, Git

BI & Visualization: Tableau, Power BI, Salesforce CRM Analytics, Streamlit, executive dashboards, self-serve analytics

Machine Learning: Logistic Regression, XGBoost, ROC-AUC, precision/recall, SHAP explainability, deployed Streamlit apps

AI & Emerging: Anthropic API, prompt engineering for clinical workflows, LLM-powered tool development

Domain: HIPAA-regulated healthcare data, CMS Medicare, EMS and mortality datasets, public health surveillance

EXPERIENCE

Data Program Manager Galveston County Health District · Texas City, TX *Jun 2022 – Present*

- Led a **\$1M data integration initiative** architecting scalable pipelines ingesting multi-source data (SQL, Salesforce CRM, REST APIs) into a centralized analytics layer used daily by executive leadership.
- Rebuilt production SQL pipelines and transformation logic from the ground up, **improving reporting accuracy by 40%** and establishing the organization's first single source of truth for cross-functional KPIs.
- Designed and deployed automated Tableau dashboards monitoring cost, utilization, and operational KPIs, adopted across leadership and operating teams with **zero ongoing analyst support required**.
- Implemented automated data quality validation workflows, reducing errors and building stakeholder trust in analytics products across the district.
- Built and deployed a live clinical AI triage tool for oncology using the Anthropic API, reducing documentation time and generating provider-ready summaries from structured intake data.

Data Analyst Galveston County Health District · Texas City, TX *Aug 2021 – Jun 2022*

- Built SQL and Python ETL pipelines cleaning and modeling datasets exceeding **2M records** to power executive reporting.
- Shipped automated Tableau dashboards and self-serve analytics products, reducing ad-hoc reporting requests significantly and freeing leadership from data retrieval bottlenecks.
- Performed statistical analyses in Python and STATA to support operational and strategic decision-making across program areas.

COVID-19 Analytics Lead / Data Specialist Galveston County Health District *May 2020 – Aug 2021*

- Owned Salesforce CRM-driven analytics pipelines supporting COVID-19 testing, hospitalizations, and case tracking in a high-volume, high-stakes environment.
- Delivered executive dashboards and real-time analyses that directly informed outbreak response decisions and resource allocation across the district.
- Analyzed secondary healthcare datasets to identify chronic disease prevalence trends and translated findings into intervention recommendations.

PORTFOLIO PROJECTS

Texas Opioid Mortality Surveillance *Live Tableau dashboard · public.tableau.com/sara.maknoija*

- Executive dashboard tracking opioid deaths, EMS naloxone response, and drug type shifts across 20 Texas counties (2018-2022). **Fentanyl share grew from 38% to 68%**. Five-view layout with dynamic filters built for county health leadership.

Oncology Triage Assistant *Deployed Streamlit app · [Anthropic API](#)*

- Clinical AI tool for oncology nurses. Guides structured symptom intake, flags safety criteria, and generates provider-ready summaries using the Anthropic API. Prompt design keeps the model outside clinical decision-making.

Patient No-Show Risk App *Live app · sara-noshow-risk.streamlit.app*

- XGBoost model on 110,527 appointments achieving **0.721 ROC-AUC** and 79% no-show recall. SHAP analysis identified wait time as the dominant predictor. Deployed as a live risk scoring tool accessible to non-technical clinical staff.

EDUCATION

Master of Science, Data Science Boston University (Online) *In progress*

Master of Public Health, Community Health Massachusetts College of Pharmacy and Health Sciences

Bachelor of Physiotherapy D.Y. Patil University, Navi Mumbai, India
